

Produced with model assistance. Every page on this site, and every document in the dev packs area, was drafted with a large language model and reviewed by a person before publication. Nothing on this site is a compliance assessment, and no page claims conformity to any standard. [What we do not say, and why](#) · [how every claim here is evidenced](#)

What each level actually gets you

Start with the free column. The templates are published with read keys and anybody can take one — so what each paid step adds is only legible next to a column that does not have it. The licence row on its own explains the first step.

	Free £0 Published, with read keys	The pack £10	A working vault £50	Corrected for you £500	Two sessions £1,500
WHAT YOU GET					
The behaviour policy, the grant, the mandate and the delta The document itself is the same at every level. What changes is the form it arrives in and who does the correcting.	✓	✓	✓	✓	✓
Packaged as a download At the free level you take the files off the published vault yourself. From the first paid level a zip arrives on the page you land on, with its size and its sha256 beside it.	Take it yourself	✓	✓	✓	✓
A vault you hold the keys to A vault is versioned, has its own app, and can be handed to somebody with a read key. None of that survives an email, which is the difference between the first paid level and the second.	—	—	✓	✓	✓

	Free £0 Published, with read keys	The pack £10	A working vault £50	Corrected for you £500	Two sessions £1,500
Your own history, and a read key you can hand on The property that makes a vault worth more than its contents: a reader you hand the key to sees what you see, and every change is dated.	—	—	✓	✓	✓
The public key taken off it A published template carries a read key anybody has. Yours does not.	—	—	✓	✓	✓
WHOSE WORK IT IS					
The mandate corrected against your situation Below this line the mandate is the starting one, written to be corrected, and correcting it is yours to do. At and above it, that correction is done for you against the industry, the use case and the details you send.	—	—	—	✓	✓
A named security professional does the work The two upper levels are somebody's time rather than a pipeline, which is why their delivery estimate depends on a calendar.	—	—	—	✓	✓
Reviewed and signed off by that professional Signed off is not the company issuing a signed opinion as a formal instrument. That wording does not exist on this site and the delivery page keeps the two apart.	—	—	—	—	✓
Time with them, on a call Two half-hour sessions: one to find out what is actually running, one to deliver it.	—	—	—	—	Two half hours
WHAT YOU MAY DO WITH IT					

	Free £0 Published, with read keys	The pack £10	A working vault £50	Corrected for you £500	Two sessions £1,500
Licence The published files are Creative Commons Attribution, which obliges anybody using them to credit the source wherever it ends up. Every paid level replaces that with a commercial licence to the buyer over the same material.	CC BY — you must attribute	Commercial, to you	Commercial, to you	Commercial, to you	Commercial, to you
Use it in client work without crediting us The practical difference the licence makes, said in the words somebody would actually use it in.	—	✓	✓	✓	✓
Your name on the licence From the vault level the licence names you, because there is an artefact for it to sit in.	—	—	✓	✓	✓
WHEN IT ARRIVES					
Delivery At the two upper levels the clock starts when you send the details rather than when you pay, because until then there is nothing to work on. The constraint is one person's calendar.	Now	Immediately	1 to 2 days	1 to 3 days from your reply	1 to 5 days from your reply
Paid in full up front The two produced levels take the whole price. The two that are somebody's time take a fifth on the order and the rest when the work is in your hands.	Nothing to pay	✓	✓	A fifth now	A fifth now

Every cell here is read off `data/offers.yml` or off a ruling, and a row whose cells would be a promise rather than a description is not on this table yet. What is still being specified is on the board rather than in a column.

How to read it

Every cell is read off something. A price comes from `data/offers.yml`, a capability from what that level's page says it gets, a licence from a ruling. A row whose five cells would be a *promise* rather than a *description* is not on this table — what is still being specified is on the board rather than in a column, because a table is the place where an unproven claim is hardest to notice and easiest to believe.

The free column is not a teaser. Fifteen template shapes are published with read keys, at riskmandate.ai. Go and open one before you buy anything here. That is not generosity and it is not a funnel: a policy nobody can check is a policy asking to be trusted, and the whole point of this document type is that it can be checked. **EXISTS AND RUNS 15 SEP 2026**

The licence is the first step, and it is the one worth understanding. What is published is Creative Commons Attribution, which obliges anybody using it to credit the source wherever it ends up — in a client report, inside a product, in a document that goes to a regulator. The paid levels replace that with a commercial licence to you over the same material. That is grantable because the copyright in the pack is ours: everything in it was written here. **The wording is not drafted yet**, and the ledger says so rather than this page implying otherwise. **READ, NOT RUN 16 SEP 2026**

The line that matters most is between the second and third rows of the middle group. Below it, the mandate is the starting one — written to be corrected, and correcting it is yours to do. At and above it, a named security professional does that correction against the industry, the use case and the details you send. **DELIVERED BY A PERSON 15 SEP 2026 DELIVERED BY A PERSON 15 SEP 2026**

store.sgjit.ai	THE OFFERS	WHO IT IS FOR	PAYING
Every agent needs a licence to operate. This is where you buy one. Six offers, four of them with a price and a code, two of them listed and not yet buyable, grouped by which of three buyers each was built for. The paid thing is not access and it is not customisation. It is independence.	All six, side by side	The three buyers	The two rails
	The two add-ons	You run agents today	Why a link, not a reader
	What is not for sale yet	You are backing a company	Booking a person
		You are a startup	

Nothing here is a compliance assessment, nothing here is a mark of conformity to any standard, and no opinion here is personal: **the company issues every opinion**, and the person who sells is never the person who signs. Outputs are model generated and marked as such.

This document is released under the Creative Commons Attribution 4.0 International licence (CC BY 4.0). The code that builds it is Apache-2.0.

No analytics. No cookies. No third-party fonts, scripts or CDN — every byte of this site is served from this domain. **Every page that sells anything opens no network connection at all**, and a build check holds that line. The one exception is named and narrow: a

review

of a vault embeds that vault from one host, through one vendored component, and says so on itself. Nothing anywhere here sends anything about you — no fetch, no beacon, no socket, on any page. Paying happens on the payment provider's own pages, which is the only place a card number should ever be typed: nothing on this site collects one. Prices are in pounds — pricing in euros while settling in pounds adds about two per cent.
